

Welcome

Today's meeting is about the access management plan for U.S. 95 in Payette County. It is part of a long-term corridor study for U.S. 95.

The plan will include ways to reduce accidents while maintaining speed and traffic flow – such as managing the number of driveways.

Access management will be phased in over time through a partnership of local governments and the Idaho Transportation Department.

Your input today will help ITD refine the draft of the access management plan.
